Amendments to the Abstract:

To reference specific features in the drawings

(PS) is replaced by : "(1)"

(EX) is replaced by : "(2)"

Please replace Abstract with the following amended Abstract :

ABSTRACT

The inventive shock absorber means for components and cards bearing printed circuits and components makes it possible to reduce the risk of microbreaks on printed circuit tracks and component failures.

Said means comprises a flexible part (PS) (1) arranged between the extremities thereof (EX) (2).

The inventive shock absorber means is used, in particular for the components and cards bearing printed circuit and components used for devices which are frequently moved and/or exposed to variable temperatures.
